

# Public Finance and Development Consulting

## Bring Custom Support to Your Critical Projects

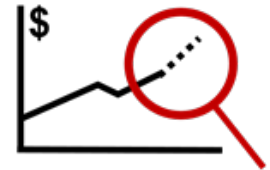

### Strategy and Planning

Our strategic planning process will help you complete long-term initiatives or improve day-to-day operations. We combine stakeholder engagement, vision development, goal setting and implementation. This approach will accommodate a communitywide economic development strategy or an organizational plan.

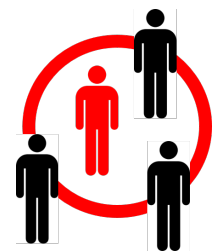

### Forecasting and Evaluation

Our forecasting process will give you confidence to make your most important budget, revenue, or development decisions. We combine robust and sophisticated quantitative models with qualitative techniques like surveys and focus groups. We then present the results in clear, easy to understand ways that help you manage risk and maximize your decision-making flexibility.

### Community Engagement and Coordination

We developed a stakeholder engagement and ecosystem-building process to help you implement new or existing programs. No organization has the resources to accomplish its goals alone. That is why we help you create a collective-impact process that aligns all community stakeholders in support of a common vision. This approach is ideal for providing business and community development and core municipal services in more effective and efficient ways.
